

SAVANNAH

The overall impression of the Savannah is a tall, lean, graceful cat with striking large dark spots and other bold markings on a luxurious tawny, gold, orange, silver, black or black smoke background. The cat is a replica of the tall, lean, muscular Serval cat of the African plains from which it originated. Affectionate and outgoing, with exceptionally long neck, legs and ears. The Savannah is both unusual and beautiful.

I – BODY/CONFORMATION (40)

(8) BODY – The torso is long, lean and well-muscled with a full deep rib cage, prominent shoulder blades, a slight, but not extreme tuck-up and a rounded rump. The hip and thigh are full and long and somewhat heavy in proportion to the rest of the body.

(7) BONING – Medium boning with density and strength.

(7) MUSCULATURE – Firm, well developed, yet smooth.

(8) LEGS – Longer than average, well muscled, without appearing heavy or overly delicate. Back legs are slightly longer than the front legs.

(3) FEET – Oval, medium in size.

(7) TAIL – Medium to thick in width. Medium in length, ending between the hock and just above ground level when standing with preferred length just below the hock. Tail should taper slightly to a blunt end. Whippy tails are not desired.

II – HEAD TYPE (40)

(6) SHAPE – The face forms a equilateral triangle. The triangle is formed by the brow line over the eyes; the sides follow down the jawbone with a rounded finish at the muzzle. Above this triangle the forehead and ears form a rectangle from the brow line to the tops of the ears. The head is small in proportion to the body.

(4) CHIN – From the frontal view the chin tapers to follow the triangle of the head. In profile, the nose is slightly protruding so that the angle from the nose to the chin slants back, which may cause the chin to APPEAR recessed.

(4) MUZZLE – The muzzle is tapered with no break. It falls within the bottom portion of the facial triangle that runs from the brow to the point of the chin. Whisker pads are not pronounced.

(3) NOSE – Viewed from the front, the nose is wide across the top with low set nostrils, in profile, there is a slight downward turn at the end, giving a rounded appearance. Nose leather is slightly convex, and wraps up over the nose.

(7) EARS – Ears are remarkably large and set high on the head. Wide with a deep base. Upright with rounded tops. The outside base of the ear should start no lower on the head than the height of the eyes. The inside base of the ears is quite close at the top of the head. Ideally, a vertical line can be drawn from the inner corner of the eye up to

the inner base of the ear. Ear furnishings may be present. Light coloured, horizontal bars (known as *occelli*) on the back of the ears are desirable.

(6) EYES – Medium sized and set underneath a slightly hooded brow. The top of the eye resembles a boomerang set on the exact angle so that the corner of the eye slopes down the line of the nose. The bottom half of the eye has an almond shape. The eyes are moderately deep set and low on the forehead with at least one eye width apart. Tear stain markings are present along and between the eye and the nose. All eye colours are allowed and are independent of coat colour.

(4) PROFILE – The forehead is a straight to slightly convex curve from the top of the head to the ridge just above the eye where there is a slight change of direction and a straight to very slight concave curve from that ridge to the tip of the nose. In profile, the face also forms a triangle from the top of the eye to the tip of the nose, turning to follow the jaw line and back up to the eye.

(6) NECK – Long and lean.

III – COAT TEXTURE/LENGTH (8)

Short to medium in length with good substance and a slightly coarse feel to it. Coarser guard hairs cover a softer undercoat, the spots have a notably softer texture than the guard hairs. The coat is not inordinately dense and lies relatively flat against the body.

IV – COLOUR / PATTERN (12)

(4) COLOUR – Black, brown (black) spotted tabby, silver spotted tabby, black smoke ONLY. No preference is given to ground colour on the brown spotted tabby. Bold, solid markings are preferred on all tabbies. In any variation the lips are black, and the tear duct lines are prominent.

On the spotted Savannahs the nose leather can be pink to brick red, solid black, or black with a light pink or brick red center stripe. In black Savannahs, the nose leather must be solid black. Paw pads in any variation should be deep charcoal or brownish black.

(8) PATTERN – SPOTTED PATTERN ONLY. The spotted Savannah pattern is bold, dark-brown to black spots which can be round, oval, or elongated solid spots. A series of parallel stripes, from the back of the head to just over the shoulder blades, fan out slightly over the back and the spotting pattern follows the line of the stripes from the shoulders continuing the length of the body. Smaller spots will be found on the legs and feet as well as on the face.

NOTE: The black Savannah may have ghost spotting. Visible spotting pattern on the smoke Savannah is preferred. In all colours any visible pattern must be spotted.

V – CONDITION & BALANCE

The breed is to display firm muscular development. The Savannah is an exceptionally graceful, well-balanced cat with striking colour and pattern.

TEMPERAMENT

Confident, alert, curious and friendly cat.

OBJECTIONS

DEDUCT

* Spots that are any colour other than solid dark brown to black.	3-8
* Rosettes.	3-8
* Vertically aligned spots, mackerel tabby type stripes	1-6
* Any distinct white locket/spot on the neck, chest, abdomen or other areas.	4
* Cobby body.	2-5
* Small ears.	1-3
