

SPHYNX

The most distinctive feature of this cat is its appearance of hairlessness. The Sphynx is of medium size and body conformation with substantial weight for its size. Females are generally smaller than males. The head shape is a modified wedge, with prominent cheekbones and whisker pads giving a squared appearance to the muzzle. The body is warm and soft to the touch, with a skin texture akin to soft peach fuzz. The skin is wrinkled especially between the ears, around the muzzle and the shoulders (more wrinkled in kittens). The Sphynx is sweet-tempered, lively, intelligent, and amenable to handling.

I – BODY/CONFORMATION (35)

BODY – The shape of the body is distinctive. The medium length body is hard, muscular with a broad, rounded chest and a full round abdomen. The rump is rounded and muscular. The back is slightly arched to the touch. The boning is medium.

(5) NECK – The neck is medium in length, rounded and well muscled with a slight arch extending from the shoulders to the base of the skull.

(10) CHEST – The chest is broad and may tend towards “barrel chested”.

(10) ABDOMEN & RUMP – The abdomen is thick, well rounded, but not fat. The rump is muscular and proportionate to the width of the shoulders.

(5) LEGS & FEET – The leg length is in proportion to the body but not fine-boned. The legs are firm and muscular to the feel. Females legs may be more slender than those of the males. The hind legs are slightly longer than the front. The forelegs are straight. The paws are oval with five toes in front and four behind. The toes are long and slender and the paw pads are thicker than in other breeds, giving the appearance of walking on air cushions.

(5) TAIL – The tail is whippy, tapering from body to tip. The tail length is to be in proportion to the body. A lion tail (puff of hair on tip) is acceptable.

II – HEAD TYPE (35)

HEAD – The head is a modified wedge, slightly longer than it is wide, with prominent cheekbones and a distinct whisker break. The skull is slightly rounded with a flat plane in front of the ears. The profile is gently curved from the tip of the nose to the brow. The eyes are large, rounded lemon in shape, slanting to the outer corner of the ear. There is slightly more than the width of an eye between the eyes. The ears are very large, broad at the base and open with no interior hair. They are upright, neither low set nor on the top of the head.

(5) SIZE/SHAPE – The head is medium size. The shape should be a modified wedge with rounded contours, being slightly longer than wide.

(10) EARS – The ears are large to very large, broad at the base with tapering lines to a rounded tip. The ears are set at a slight angle on the head, but are not flaring. Upright, neither low set nor on top of head. The interior is totally

hairless. Slight amount of hair is allowed on the lower outside edges and on the back of the ear.

(5) MUZZLE/CHIN – Distinct whisker break with prominent, rounded whisker pads. Strong, well developed chin.

(5) PROFILE – The profile has a gentle curve with a noticeable slight to moderate stop at the bridge of the nose.

(5) CHEEKBONES – Prominent, rounded cheekbones which defines the eyes and forms a curve above the whisker break.

(5) EYES – The eyes are large. They are in the shape of a rounded lemon with the pointed end of the lemon slanting to the outer corner of the ear. They are set wide apart.

III – COAT TEXTURE/LENGTH (30)

The appearance of this cat is one of hairlessness. However, short, fine hair may be present on the feet, outer edges of the ears, the tail and scrotum. The bridge of the nose should be coated. The remainder of the body has a covering of peach-like fuzz. This coat/skin texture creates the feeling of resistance when stroking the cat. Wrinkled skin is desirable around the muzzle, between the ears, and around the shoulders. The skin is wrinkled especially between the ears, around the muzzle and the shoulders (more wrinkled in kittens). There are usually no whiskers but if whiskers are present they are short and sparse.

IV – COLOUR

All colours (including eye colour) and patterns accepted. White buttons or lockets are allowed.

WITH WHITE COMBINATIONS

Bi-Colour Combinations:

All established colours and patterns **with the addition of white** (preferred minimum the cat should have white feet, legs, undersides, chest, and muzzle—ideally an inverted 'V'). Solids, Tabbies, Patched Tabbies, Tortoiseshells.

All eye colours are allowed including Odd-eyed (one eye must be blue).

Calico Combinations:

All established colours and patterns distributed as described for the Calico pattern (a tri-colour cat with un-brindled medium to large patches of DENSE colour and red, or DILUTE colour and cream on a white background). Calico, Dilute Calico, Tabby Patterned Calico. All eye colours are allowed including Odd-eyed (one eye must be blue).

Van Combinations:

All established colours and patterns distributed as described for the Van pattern (face and body predominantly white with colour restricted to the head and tail. One or two small spots of colour on the body are allowed): Solids, Tabbies, Tortoiseshells, and all Calico patterns. All eye colours are allowed including Odd-eyed (one eye must be blue).

SEPIA and MINK

Sepia and Mink colours are recognized in all established colours and patterns including with white (bi-colour, calico, van) except Pointed or Pointed with white.

Sepia eye colour is gold or greenish-gold, and odd-eyed (one blue eye and one gold or greenish-gold eye). Sepia skin colour is paler and warmer than the equivalent of traditional colour. A slight intensification of colour on the ears, tail, feet and face is noticeable especially in kittens.

Mink eye colour is blue-green to aqua, and odd-eyed (one blue eye and one blue-green / aqua eye). Mink skin colour is much lighter than the corresponding sepia colours and develops more intense colour on the ears, tail, feet and face; than on the body.

Sepia and Mink are recognized in:

Solids, Tabbies, Patched Tabbies, Tortoiseshells. All established colours and patterns with the addition of white (bi-colour, calico, van) except Pointed or Pointed with white.

EXCEPTION: *black* (including with white), black* based tabby, patched tabby, and tortoiseshell are NOT recognized as sepia or mink.*

**The Sepia and Mink equivalent of Black is SEAL.*

TABBY PATTERNS

CLASSIC TABBY PATTERN

Markings dense, clearly defined and broad. Legs barred with bracelets. Tail evenly ringed. Necklaces on neck and upper chest are to be unbroken. Frown marks on forehead form a letter "M". Line runs back from outer corner of eye. Swirls on cheeks. Vertical lines over back of head extend to shoulder markings which are in the shape of a butterfly with both upper and lower wings distinctly outlined and marked with dots inside the outline. Back markings consist of a vertical line down the spine from butterfly to tail with a vertical stripe paralleling it on each side. Large blotch on each side to be encircled by one or more unbroken rings. Side markings should be the same on both sides. Double vertical rows of buttons on chest and stomach.

MACKEREL TABBY PATTERN

Markings dense, clearly defined. Legs barred with bracelets. Tail evenly ringed. Necklaces on neck and upper chest, are to be unbroken. Frown marks on forehead form an "M". Line runs back from outer corner of eye. Lines run down the head to meet the shoulders. Spine lines run together to form a narrow saddle. Unbroken lines run around the body vertically. Buttons on chest and stomach.

SPOTTED TABBY PATTERN

Markings dense, clearly defined. Legs barred with bracelets. Tail evenly ringed. Necklaces on neck and upper chest, are to be unbroken. Frown marks on forehead form an "M". Line runs back from outer corner of eye. Lines run down the head to meet the shoulders. Spine lines consist of a vertical line preferably composed of spots. Spots on body may vary in size and shape but should not run together (i.e. a broken Mackerel pattern). Buttons on chest and stomach.

POINTED BI-COLOURS

Applicable to all recognized colours/patterns of POINTED BI-COLOUR Sphynx (Solid Point, Tortie Point, Lynx Point, Tortie Lynx Point patterns)

POINTED WITH WHITE

Pointed with White should conform to the pointed pattern with the addition of white overlaid. The face and the body should exhibit substantial white (a minimum of one-third is preferred). There must be some white on the face with enough white to indicate an inverted ‘V’ being preferred. Small to medium spots of colour are allowed within the white, both on the face and on the body. Disqualify no white on face.

Nose Leather: Pink and/or the corresponding point coat colour.

Paw Pads: Pink and/or the corresponding point coat colour.

Eye Colour: Clear brilliant blue. Deep blue preferred.

POINTED VAN

Pointed Van should conform to the pointed pattern with the face and the body exhibiting substantial white (a minimum of one-third is preferred). Point colour is confined to the head and tail with some allowance of point colour on the legs. There must be enough white on the face to differentiate the Van pattern from an inverted ‘V’ of a bi-colour. One or two small spots of colour are allowed within the white, both on the face and on the body. Disqualify no white on face.

Nose Leather: Pink and/or the corresponding point coat colour.

Paw Pads: Pink and/or the corresponding point coat colour.

Eye Colour: Clear brilliant blue. Deep blue preferred.

GENERAL PREFACE

It is important to consult the individual breed standard for breed-specific disqualifications. The following list applies to all breeds unless otherwise indicated.

WITHHOLD AWARDS (W/A) FOR:

1. More or fewer than five toes on each front paw and four toes on each back paw. Pixie-Bobs are exempt from this disqualification.
 2. White lockets, buttons, or toes on any cat, except where part of the natural colour or pattern, or unless otherwise specified in the breed standard.
 3. Any entry that is declawed. Clear nail-tip covers are allowed.
 4. Any deformity or disfigurement — hereditary, congenital, or acquired. Household Pet entries are exempt from this disqualification.
 5. A cat showing evidence of intent to deceive (e.g., the presence of powder or chalk residue in the coat after normal grooming; the use of tints, colour rinses, or other artificial colouring concealment media; sanding or shaving).
 5. An entry, without provocation, attacks a judge or other person within the ring area, the entry shall be deemed vicious and disqualified (D.V. Disqualified, Vicious).
 6. Kinks, visible or invisible. Kink is defined as a rigid deflection of the tail line, whether visible or not. Small, invisible bumps or calcium deposits shall be considered a fault. Refer to individual breed standards for exceptions to this rule.
 7. Wrong eye colour (unless otherwise specified in a breed's standard).
 8. Crossed eyes in any breed. Household Pet entries are exempt from this disqualification.
 9. Maloccluded jaws.
 10. Monorchidism (the absence of one testicle) or cryptorchidism (the absence of both testicles) is grounds for withholding awards in the Championship (whole adult) or Miscellaneous (whole adult) classes.
 11. Any entry that scores less than 90 points.
6. Excellence in one aspect of the standard shall not offset a deficiency in another. Because the standard specifically describes the various parts of the cat's appearance, all judges shall conduct their judging in accordance with these specifications.
 7. All entries should possess the appropriate weight, condition, and balance for their breed. Balance is the overall physical picture of the cat. The cat must 'fit together', and no single quality **should** be emphasized. Judges shall not penalize any fault by more than the cat would have earned if perfect in that detail.
 8. Judges shall penalize or disqualify N.F.A (No Further Award) for poor condition, indicating illness or poor care.
 9. If an entry has fleas, fungus, ear mites, etc., the judge shall N.F.A. the entry and notify the Show Manager.
 10. An obviously pregnant or lactating queen will be disqualified as N.F.A. (No Further Awards).
 11. Natural lighting should be used wherever possible. Allowances should be made for harsh artificial lighting, which may distort eye and coat colour.
 12. An entry presented in the judging ring showing noticeable effects of a sedative (e.g., third eyelids visible, overly glassy eyes, inability to stand or sit, lack of coordination or muscle control) shall not receive an award. The judge will record N.F.A (No Further Award) in their judge's book.
 13. Any cat too nervous or intractable to handle by the judge or the owner / agent must be disqualified (D.U.H. – Disqualified, Unable to Handle).
 14. A judge may disqualify any entry whose owner / agent draws specific attention to himself or his entry when benching the cat in the judging ring or at any time during judging. Judges shall enter D.L.E. (Disqualified, Lack of Etiquette) in their books.
 15. When an entry's colour or pattern has been misclassified, the entry shall be transferred to its correct class with the owner's permission.
 16. Cats recovering from recent surgery (or injury) where the incision (or wound) has not completely healed, stitches removed, etc.; must be disqualified (N.F.A. – No Further Awards).

FACTORS TO CONSIDER:

1. A weak, receding, or protruding chin is considered a serious fault. Deductions can be made for chin, profile, and balance.
2. Allowance should be made for stud jowls in males. Usually, males are proportionally larger than females.
3. Allowance is to be made for seasonal variations in coat.
4. Allowance should be made for faint tabby markings in kittens and young cats, except when they are part of the normal colour pattern.
5. Allowance should be made for undeveloped eye colour and undeveloped coat colour in kittens and young cats.
